

Sergey Filin | Сергей Филин

Backend Engineer with 11+ years of experience.
Cross-functional backend and data engineering across product, infrastructure and database layers.
Experience with architecture, refactoring, infrastructure modernization, distributed data systems and payment integrations.
Strong background in MySQL, ClickHouse, MongoDB, PHP/Symfony, Go, Python, AWS, Docker and CI/CD.

Experience:

 [Trending.bid](#)

Senior Backend Engineer/DBA

12.2024 - Present(1y.6m.)

 Prague, Czech Republic [Full remote]

Real-time ad bidding platform. RTB ecosystem including own SSP and DSP. I worked on the advertisers' self-service area, reporting interfaces and payment-related integrations, while improving statistics presentation from distributed data sources and internal product interfaces.

I updated CI/CD infrastructure, migrated services to Docker, carried out deep refactoring and upgraded projects to current language and runtime versions.

I also investigated and refactored a high-load Go service responsible for advertising auctions, improving the reliability and performance of the bidding flow.

 [FicBook/FicFan](#)

Senior Backend Engineer

12.2023 - 12.2024(1y.1m.)

 Riga, Latvia [Full remote]

The largest platform for fanfiction authors and writers. I worked on backend functionality using Symfony and MySQL, refactored existing services and implemented integrations with external APIs.

 [Nexus](#)

Senior Backend/AWS Engineer

03.2022 - 08.2023(1y.6m.)

 Tbilisi, Georgia [Full remote]

Startup specializing in the implementation of cloud technologies in the financial sector. My responsibilities included prototyping client-facing applications and backend services, integrating the AWS technology stack across application layers and using TypeScript with AWS Lambda for data storage, authorization, and processing.

 [Freelance & Projects](#)

Senior Backend Engineer/DBA

07.2021 - 03.2022(9m.)

 Worldwide [Full remote]

Engaged in full-cycle game projects, including game design, project leadership, and infrastructure decisions, by leveraging Node.js, web technologies, and the Godot engine to build and optimize interactive experiences with real-time functionality and robust performance.

 [Stark Games](#)

Senior Backend Engineer

07.2020 - 07.2021(1y.)

 Minsk, Belarus [Full remote]

Game studio.

I contributed to the company's main game series, [Magic Seasons\(Ёлочка 2020-2021\)](#). It has been a TOP-1 game on VK (vk.com) and OK (ok.ru) social networks for over 7 years.

I worked on server-side systems, optimizing and refactoring the codebase and integrating parts of the Symfony framework into the project. I worked closely with MySQL and MongoDB databases and developed a distributed transaction system spanning over different databases. Worked on integrating new features via social networking APIs.

 [Part of MyKitten](#)
 [Part of Elochka](#)

Hobbies

05.2018 - 06.2020(2y.2m.)

Saint Petersburg, Russia

This was a large project including an advertisers' self-service website with advanced reporting tools, payment gateway integrations, a Java bidding cluster, and distributed databases in MySQL and ClickHouse (400TiB+ of data).

I worked on personal accounts, promo codes and payment system integrations. I was also responsible for statistics and data presentation from distributed sources using complex SQL queries. I improved database structures, connected aggregation tables, handled data normalization, and assisted other campaign projects with databases and payment APIs.

 [SiteMaket](#)

Junior, Middle Full-stack Engineer

11.2015 - 04.2018(2y.6m.)

Saint Petersburg, Russia

Web studio.

Worked on CRM systems and multi-tenant eCommerce systems. Designed databases, payment systems, mailing lists, and integrations with external API services for payments, maps, weather, delivery etc.

Integration of 3D tours on customer sites.

 [Freelance & Projects](#)

Junior Full-stack Engineer

01.2015 - 10.2015(10m.)

Worldwide [Full remote]

Provided engineering services for various advertising and web-based initiatives, focusing on server-side logic, databases, integrations and client-side support. Used Yii (1 & 2), Symfony, and Bootstrap, performed refactoring and migration tasks, implemented site parsing with Python/PHP and Gearman, and integrated external APIs (maps, weather, etc.).
